Database Systems Lab

DELETE Operation in PDS

In this lab session, you will implement the DELETE operation to delete existing record in the data file.

Activity Details

a. Refer to the given pdsv5.h file for instructions on the changes to be done to PDS functions

b. A driver program called pds_testerv5.c is given to you. The driver will take a file with commands such as (STORE, RETRIEVE, OPEN, CLOSE) inside.

c. Test your program thoroughly with the driver program and test case file. One sample test case file is given to you

Commands

- Use the following command for creating pds_tester executable:

```
gcc -o pds_tester <roll_number>_contact.c pdsv5.c bst.c pds_testerv5.c
```

For testing using pds_tester, use the following command:

```
./pds_tester testcasev5.in
```

Submission

Upload ONLY the following file to LMS:

pdsv5.c

<roll_number>_contact.c

Replace "<roll_number>" above with your roll number in ALL LOWER CASE

YOU ARE NOT EXPECTED CHANGE ANY OF THE FILES GIVEN TO YOU
